FriendsBook-Social Media Website

OBJECTIVE

- **It is a social media website designed solely for project purpose. It has many features.**
  Features-
- **It has a register page to which new users can register to with their email and name and their details directly go in my database in phpmyAdmin.**
- **It has a login page to which existing user can log into their account with link to the database.**
- **It also generates a unique username for the user with proper validation checks with the existing user's usernames.**
- **It has many validation checks for name ,emails ,passwords and only after passing all validation checks, the data goes in our database social.**
- **After logging in properly user can do a lot of things .**
- **The user also gets a default profile picture from our database.**
- **They can upload a profile picture ,post something with post timing being showing ,comment on anyone's post, message anyone ,send friend requests, do live searching, update their details for login page.**
- **It also shows the most popular searches, stores and displays the count of likes and post made by the user .**
- **User can like or unlike any post he/she wants to.**
- **It has notifications options as well on the top right toolbar with variety of other options of messaging other users as well.**
- **You can also log out of the website by clicking on the top right icon**
- **User can post Youtube videos from URLS.**
- **User can upload images to their newsfeed.**

- **User is allowed to delete their posts as well.**

Technologies used*:*
